

Session 1

Topics Covered

- Installing Visual Studio Code and necessary extensions.
- Introduction to Markdown.
- Introduction to HTML.
- Tags and Elements.
- Semantic Elements.
- Attributes.

Practical activities/Assignments

- Research on other HTML Elements and Attributes.
- Research on other semantic HTML Elements and their non-semantic counterparts.
- Is `<!doctype html>` an element or just a declaration?
- Practise markdown formatting and other syntaxes.

Key outcomes and achievements

- Students developed a basic understanding of markdown syntax and uses.
- Students developed a basic understanding of HTML syntax and elements.
- Students understood the differences between tags and elements.
- Students were able to identify semantic and non-semantic elements and the situations to use each.
- Students became familiar with some HTML attributes like src, alt, width, height, href, and lang.

Session 2

Topics Covered

- Introduction to CSS.
- Introduction to CSS selectors.
- CSS units, the differences between them, and when to use each.

Practical activities/Assignments

- Hands-on session - HTML-only implementation of the login page from the capstone project.
- Introduction to HTML elements like section, div, form, input, button etc. in the course of the implementation.
- Outline other CSS selectors apart from the ones covered in class.
- Outline other CSS size units except px, em, rem, vw, vh, and %.

Key outcomes and achievements

- Students developed a basic understanding of CSS syntax.
- Students became familiar with some CSS selectors like element/tag selector, descendant selector, direct descendant selector, id selector, and class selector.
- Students were introduced to the concept of selector concatenation.
- Students understood the differences between CSS size units such as px, em, rem, vw, vh, and %.
- Students were able to outline the different ways to add CSS styles to a HTML document.

Session 3

Topics Covered

- Hands-on session - CSS styling of the hero section of the login page from the capstone project.
- Introduction to CSS properties like display, flex, flex-direction, justify-content, font-size, font-family, font-weight, etc. in the course of the implementation.
- Introduction to CSS variables.

Practical activities

- CSS styling of the hero section of the login page from the capstone project.

Assignments

- Completion of the CSS styling for the login panel section of the login page from the capstone project.

Key outcomes and achievements

- Students were introduced to new CSS properties.
- Students were introduced to the concept of CSS variables.

- Students were able to appreciate the importance of styling from seeing a webpage come to life with the addition of CSS.

Challenges Encountered

- Random changes in schedule: We should bear in mind that facilitators have a schedule of theirs and have planned around it when we make random changes to the schedule, so we should try to minimize this as much as possible.
- Interference/interruption from moderators: Moderators should minimize interference/interruption with facilitators' classes, like side comments, as much as possible.

Areas to continue or improve on next week

- More hands-on implementation with HTML and CSS.
- Introduction to CSS specificity.
- Introduction to Git and GitHub for code collaboration.
